

Hot dog

Nick, Ben, Andrew

Motivation

Wanted to end the all time
debate of whether a hot
dog is a sandwich or not

Hypothesis

Less than 50% of full-time UVA undergraduate students think that a hot dog is a sandwich

Hypothesis

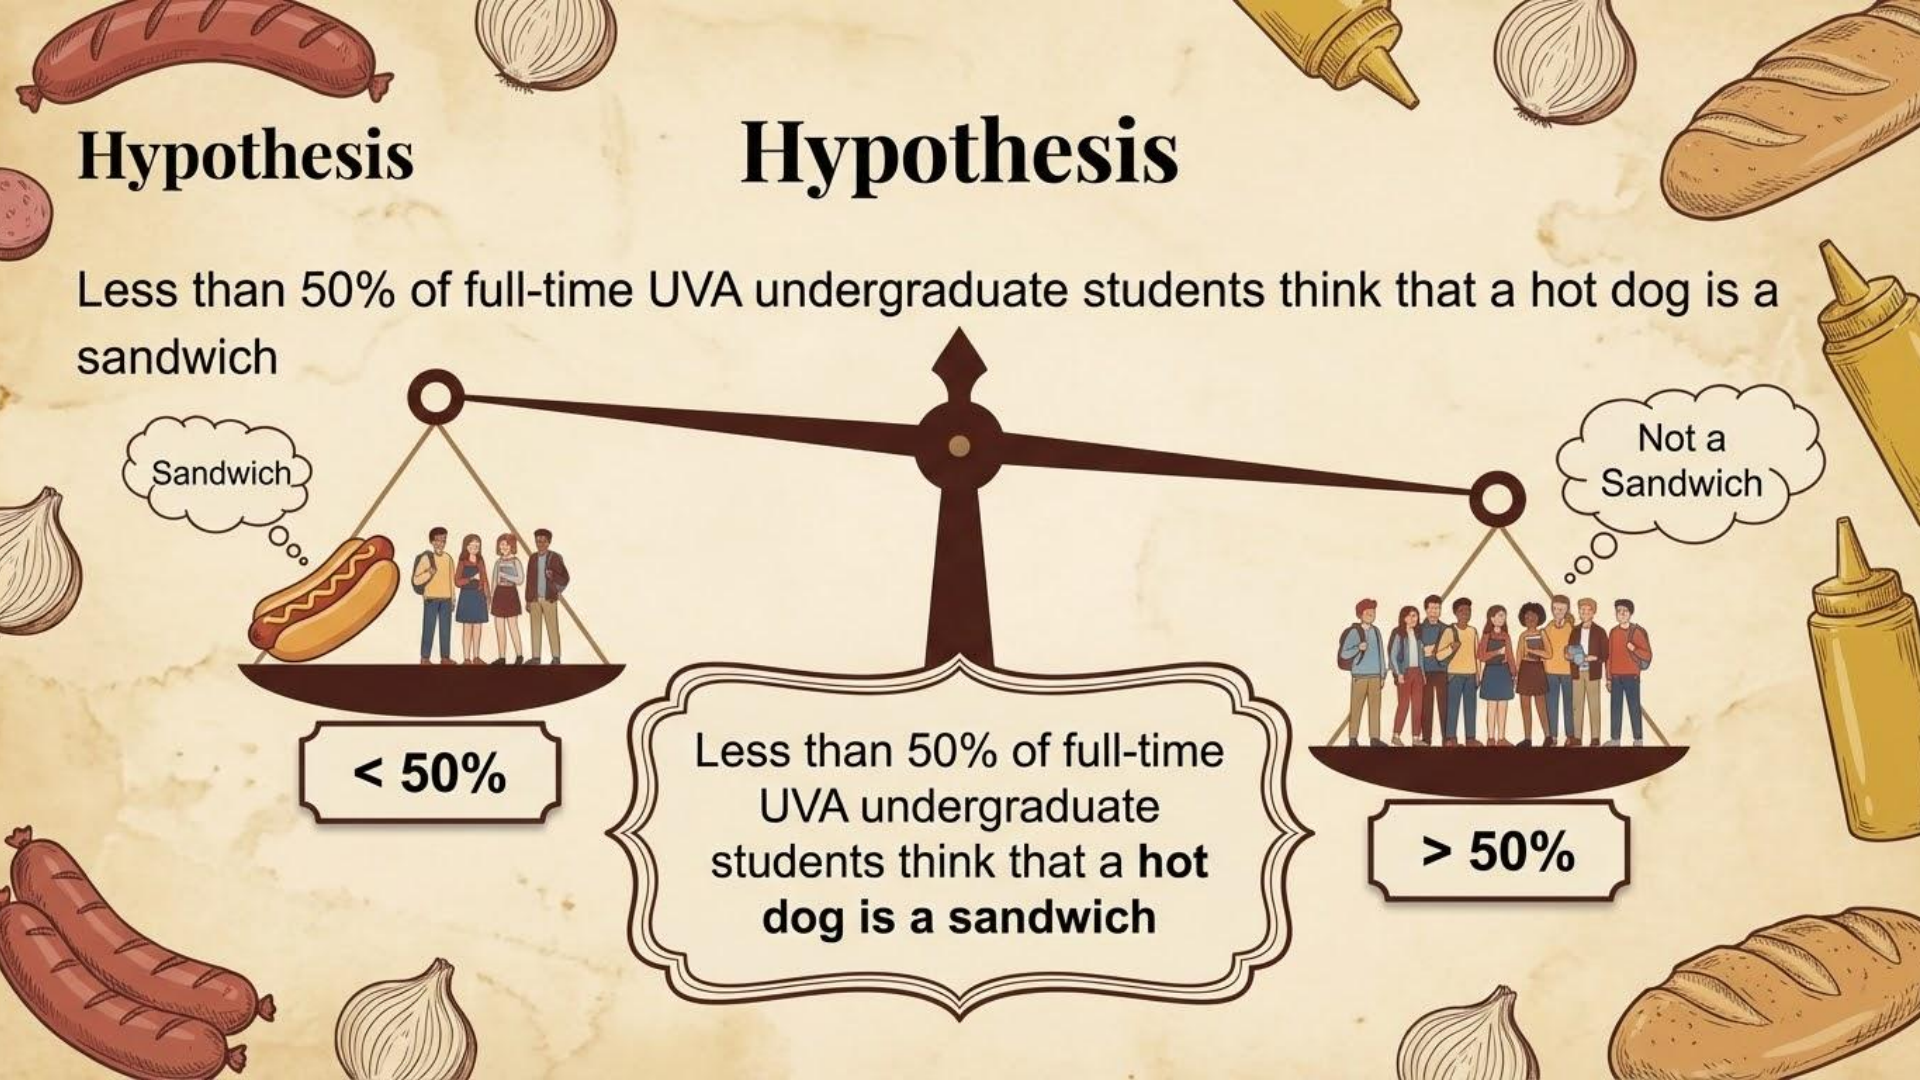

Less than 50% of full-time UVA undergraduate students think that a **hot dog** is a **sandwich**

Sandwich

< 50%

Not a Sandwich

> 50%

Data

Collection Process

Collected and cleaned data from undergraduate UVA students

Used a Google form

All responses are anonymous and self-reported

Collected January 14–16, 2026

Data Points

Timestamp of response

Full-time undergraduate status

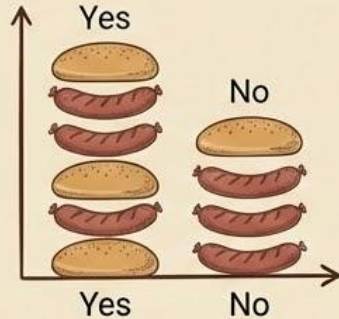

Year in college

Opinion on whether a hot dog is a sandwich

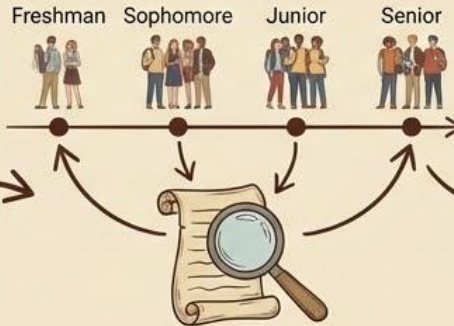

Analysis Plan

1. Visualize Responses

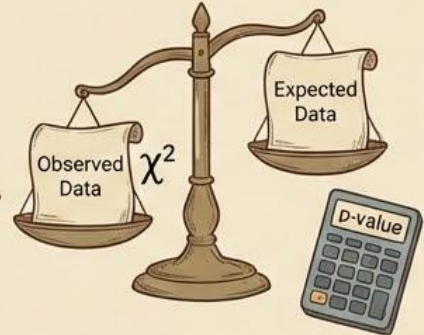

Visualize amount of Yes/No responses to "Is a hot dog a sandwich?"

2. Analyze by Year

Analyze the difference in responses in regard to respondents' year.

3. Chi-Squared Test

Perform a chi-squared test to analyze results based on year correlation.

Results/Findings

Overall, our results supported our original hypothesis. We initially hypothesized that less than 50% of UVA students would say that a hot dog is a sandwich. Our findings showed that **76%** of respondents answered “no,” indicating that a strong majority of students do not consider a hot dog to be a sandwich. While this confirms that fewer than half of respondents answered “yes,” the chi-squared test i -squared test ($p \approx 0.456$) suggests that this opinion does not significantly vary by year and is likely independent of class standing.

This exploratory analysis was successful in showing that UVA students tend to agree on this question regardless of year (can see this also in the graphs below), though the lack of first-year respondents and the skew toward upperclassmen suggest that a larger and more balanced sample would be needed for more definitive conclusions.

Next Steps

Conduct more extensive and representative surveys of the UVA undergraduate population. (Possibly other schools eventually).

Continued analysis of results using multiple other statistical methods.
